

28 April 2020

Dear Parent and Carer;

Re: Teen Tech STEM Sessions

Due to the school's involvement with Teen Tech over the past two years we have been offered the chance to access the exciting STEM related 'City of Tomorrow at Home Challenge' they are providing.

There are three identical sessions on offer during April and May and students should just access one of these.

This project is most suitable for students in Key Stage 3 and will provide an opportunity to work in virtual groups or alone.

City of Tomorrow:

This project offers students the opportunity to apply their knowledge of science, technology, and engineering to create their City of Tomorrow where no ideas are too big, and everything is smarter, kinder, and safer than before.

Students will be able to watch a live presentation – email questions for industry experts and then, when their project is completed, join a live feedback session.

Please note that these sessions are run by an external host and as such require parents or carers to register and sign their children up for the sessions they wish to attend.

For more information and to register please use the link below;

<https://teentechcity.com/parents/>

I would anticipate there being high demand for these sessions so I would advise you to register soon to avoid disappointment.

If you have any questions or your child would like some help with their projects please do not hesitate to contact me at s.romain@testbourne.school

Kind Regards

S. Romain
